

# Height Clearance Under Structures for Permit Vehicles

INFORMATION BULLETIN

# Height Clearance Under Structures for Permit Vehicles

This information bulletin shows the clearance between the road surface and overhead structures and is intended to assist truck operators and drivers to plan their routes.

It lists the roads with overhead structures in alphabetical order for ready reference. Map references are from Melway Greater Melbourne Street Directory Edition 34 (2007) and Edition 6 of the RACV VicRoads Country Street Directory of Victoria.

This bulletin lists the locations and height clearance of structures over local roads and arterial roads (freeways, highways, and main roads) in metropolitan Melbourne and arterial roads outside Melbourne. While some structures over local roads in rural areas are listed, the relevant municipality should be consulted for details of overhead structures.

## Responsibility

It is the responsibility of the operator and driver of a vehicle to ensure that the clearance under overhead structures, cables, wires and trees is sufficient to enable safe passage.

A vehicle must not travel or attempt to travel:

- (a) beneath a bridge or overhead structure that carries a sign with the words "LOW CLEARANCE" or "CLEARANCE" if the height of the vehicle, including its load, is equal to or greater than the height shown on the sign; or
- (b) beneath any other overhead structures, cables, wires or trees unless there is at least 200 millimetres clearance to the highest point of the vehicle.

Every effort has been made to ensure that the information in this bulletin is correct at the time of publication. The height clearance figures listed in this bulletin, measured in metres, are a result of field measurements or sign posted clearances. Re-sealing of road pavements or other works may reduce the available clearance under some structures. Some works including structures over local roads are not under the control of VicRoads and any changes may not have been brought to the attention of VicRoads.

VicRoads does not warrant, guarantee or make any representations regarding the currency, accuracy, correctness, reliability, usability, or any other aspect, of the information presented in this publication. VicRoads does not accept any liability for any loss or damage which may be incurred as a result of using or relying on the material set out in this publication.

*Plan your route to avoid low bridges*

◆ Under construction

September 2007

**16** In addition to the above structures on Eastlink, there will be a tolling point on each carriageway between each interchange and a number of signs/gantries. All of these structures are proposed to have a minimum vertical clearance of 5.4 m.

## Further information

More information on avoiding low bridges and overhead wires on Victorian roads can also be found in VicRoads' information bulletin, "Height Clearance on Roads – January 2000". This information bulletin is designed to assist drivers and operators of general freight vehicles and livestock vehicles, car carriers and hay carriers in planning their routes to avoid low bridges. It shows on maps where low bridges are located.

For further enquiries, contact VicRoads' Permit Issuing Officers:

- Melbourne or interstate callers, telephone (03) 9881 8852; or
- Country Victoria callers telephone 13 11 71; or visit
